Spector for Mac OS

World's Best-Selling Monitoring Software- Now Available for Mac OS X.

Works with
Mac OS X
Leopard

NEW! - Version 3.1 (Works with Mac OS X Leopard)

Install Spector on your Mac and it will record **EVERYTHING** anyone does on the Internet. Spector automatically takes hundreds of snapshots every hour, very much like a surveillance camera. With Spector, you will be able to **SEE EXACTLY** what your kids and employees have been doing online and offline.

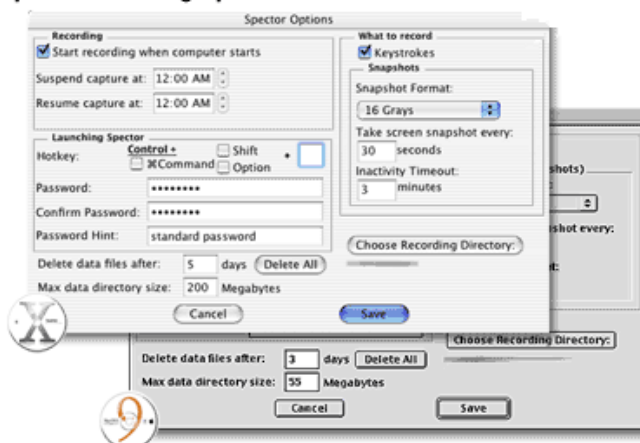

Powerful Monitoring and Surveillance Software For Your Mac

Imagine a surveillance camera pointed directly at your monitor, filming away everything that is done on your Mac OS computer. That is the idea behind the number one selling Internet Monitoring and Surveillance software, Spector. Imagine being able to download, install and start recording your Mac and Internet activity in less than 10 minutes. Imagine virtually no learning curve - if you can use a VCR, you already know how to use Spector.

How Does It Work?

Spector works by taking a snapshot of whatever is on the computer screen and saves it away in a hidden location on your computer's hard drive. A few seconds later, Spector takes another picture. In fact, Spector can automatically take a picture of your computer screen as frequently as once every five seconds.

Spector Recording Options

Spector automatically takes snapshots of your computer screen, as often as once every five seconds, or as infrequently as once every few minutes. You can decide how often and in what format (grayscale or color) Spector records.

What Does Spector Record?

You get recordings of all chat conversations, instant messages, e-mails typed and read, all web sites

Spector for Mac OS will Automatically Record:

visited, all programs/applications run, all keystrokes typed - EVERYTHING they do on the computer and on the Internet. You can come back to the computer a few minutes, a few hours, a few days or weeks later and SEE EXACTLY what they were doing, because Spector has recorded it. Simple, Easy To Use With virtually no learning curve, Spector makes it easy to start recording your Mac today. If you can use a VCR, you already know how to use Spector.

Spector Controller

The Controller is a floating window that offers simple VCR-like control of your recordings. Play your recordings like a movie, jump to the first or last frame, or review one frame at a time. Print or save snapshots and review the Keystroke Log at the press of a button.

Who Uses Spector for Mac?

Spector is appropriate for parents concerned about what their children do online, or worried about protecting their children from the dangers of the Internet. Spector is also ideal for businesses concerned about how their employees use company computers. Are your employees goofing off too much online? Sending sexually or racially offensive e-mail jokes? Spreading company confidential information in anonymous chat and message boards? You'll find out with Spector. There is no faster or more accurate way to find out than with Spector. Built For Mac Users
The award-winning Spector has been built from the ground up for the Mac OS. It is fully compatible with Power PC and Intel processor based Mac computers running Mac OS X 10.2 or later (including Mac OS X 10.5... also known as Leopard). Spector for Mac OS also supports Mac OS 9.
